

To Whom It May Concern,

In response to the plan review turndown comment requesting underground gas tank installation, please note the following:

The underground tank is being provided and installed by the licensed gas supplier under a separate scope (permit PL2025-0208). The only documentation available for this installation is the attached gas isometric plan (which is already stamped and approved), which identifies the tank location, burial configuration, and connection to the generator system.

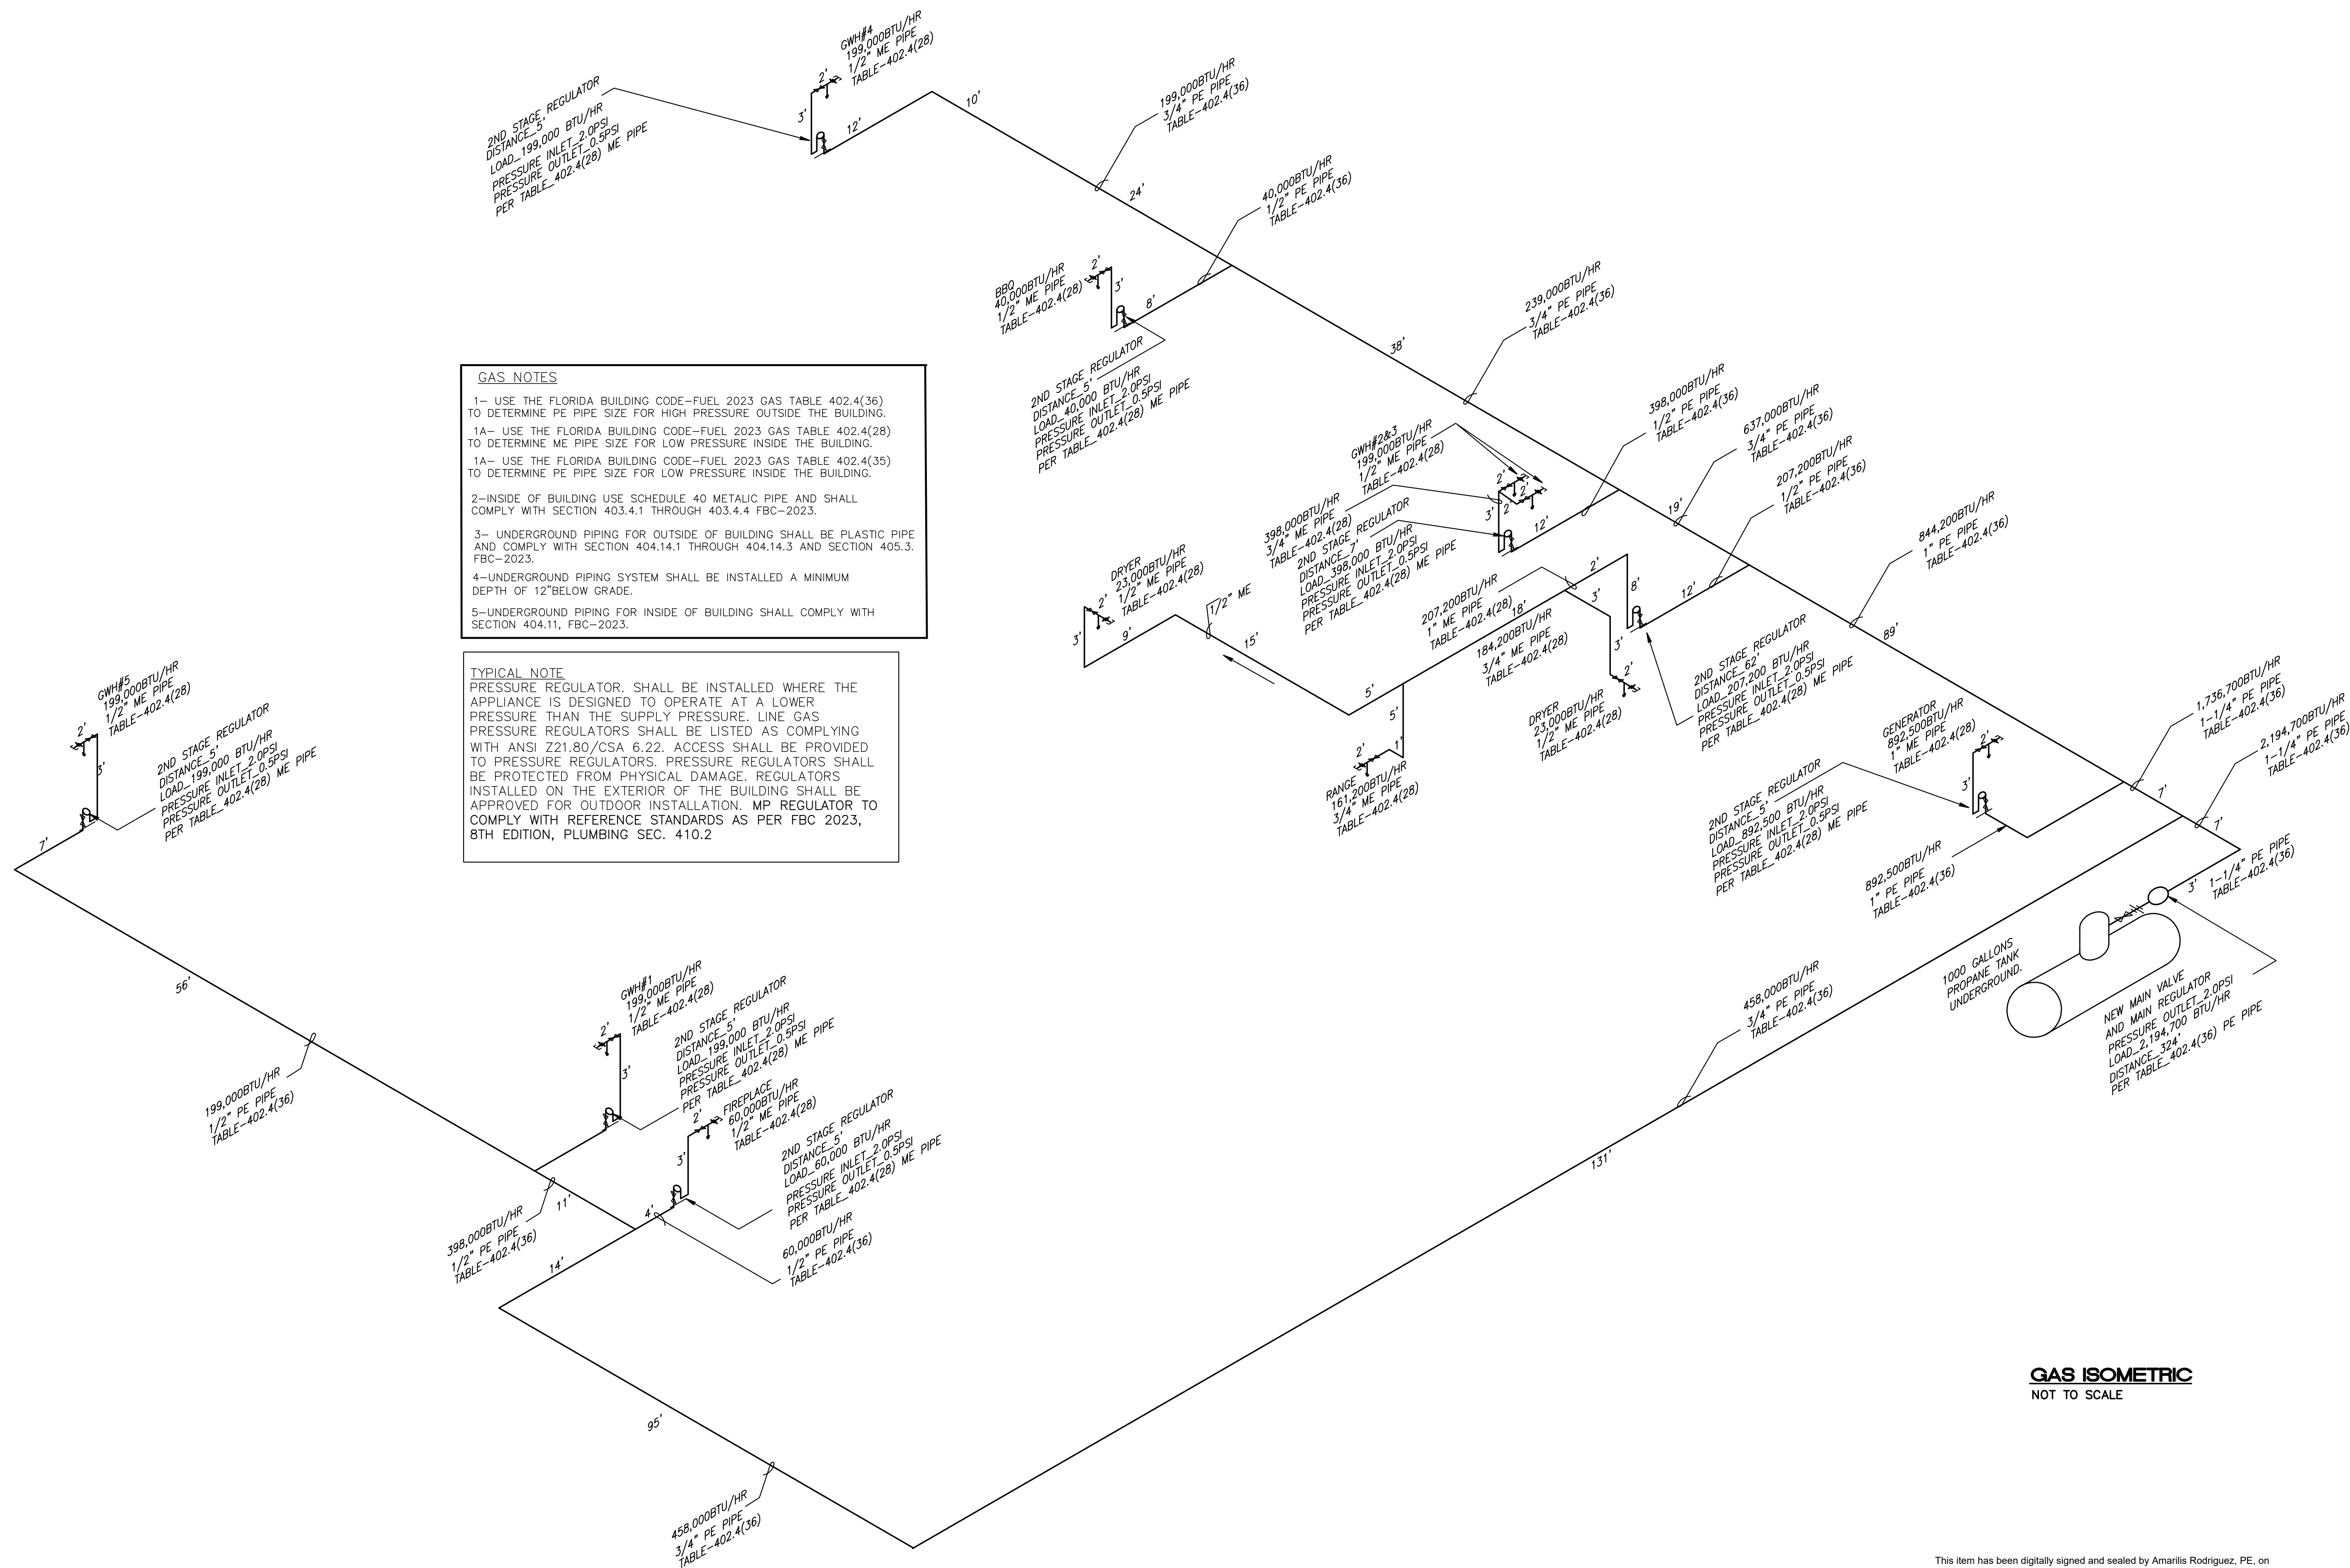

Detailed tank installation methods, anchoring, burial depth, and manufacturer-specific requirements are proprietary to the tank supplier/installer and are performed in accordance with NFPA 58 and applicable Florida codes under the supplier's permit and inspection process.

Accordingly, the attached stamped gas isometric represents the complete design information available to the project team for the underground tank installation.

We respectfully request acceptance of the enclosed stamped gas isometric plan to satisfy the underground gas tank installation detail requirement for this permit.

Thank you for your consideration.

Hollub Construction Team.
